

The Coldicott Veterinary Clinic

HEART SCREENING

Large breed dogs are at higher risk of developing dilated cardiomyopathy (DCM)

We recommend annual screening from 3 years old

♥ Echocardiography

Ultrasound of the heart to allow measurements & visualisation of chamber sizes & muscle thickness; & assess function

♥ ECG

Trace to assess electrical conductivity through the heart & screen for arrhythmias that may be present in DCM

♥ Blood Tests - ProBNP

ProBNP is released by the ventricles in response to stretching, as occurs in DCM
